Prerequisites

Java

Maven

maven

Spring STS

Tomcat

Apache Tomcat

What We Are Building

Service Features

Service Features

- Retrieve all activities that a user has done

Service Features

- Retrieve all activities that a user has done
- Retrieve a specific activity

Service Features

- Retrieve all activities that a user has done
- Retrieve a specific activity
- Create a new activity

Service Features

- Retrieve all activities that a user has done
- Retrieve a specific activity
- Create a new activity
- Update an activity

Service Features

- Retrieve all activities that a user has done
- Retrieve a specific activity
- Create a new activity
- Update an activity
- Delete an activity

Tomcat

Tomcat

- RESTFul Services are ran out of a basic war file

Tomcat

- RESTFul Services are ran out of a basic war file
- Tomcat is a very lightweight web container

Tomcat

```

Creating a Service

Creating a Service

- The most basic service needs three things:

Creating a Service

- **The most basic service needs three things:**
 - @Path - the path to the service

Creating a Service

- **The most basic service needs three things:**
 - @Path - the path to the service
 - @GET - the request method

Creating a Service

- **The most basic service needs three things:**
 - @Path - the path to the service
 - @GET - the request method
 - @Produces - the response type from the service

Creating a Service

- The most basic service needs three things:
 - @Path - the path to the service
 - @GET - the request method
 - @Produces - the response type from the service

```
@Path("myresource")
public class MyResource {

    @GET
    @Produces(MediaType.TEXT_PLAIN)
    public String getIt() {
        return "Got it!";
    }
}
```
